**DETAILED ACTION**

***Claim Rejections - 35 USC § 101***

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claim 10 is rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

***Claim Rejections - 35 USC § 112***

2. Claim 6 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 6, it is unclear if or how an amine group containing compound can be defined by the formulae wherein neither X nor Y constitute NH<sub>2</sub>.

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-9 and 11-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. 6,756,451 (Belt et al) in view of U.S. 6,831,136 (Chao et al) and U.S. 6,211,292 (St. Clair).

Belt et al disclose a process for the preparation of a hydrogenated polymer comprising A) hydrogenating the polymer in latex in the presence of hydrazine, an oxidizing agent and a

catalyst, B) separating the hydrogenated polymer from the latex and C) adding an amine compound to the hydrogenated polymer.

Belt et al does not expressly disclose mixing with a compound that is capable of reacting with an amine. The secondary references teach that amino-functionalized hydrogenated polybutadienes are useful in reactions with various materials, e.g., epoxy resins, anhydride-modified polymers, isocyanates, etc. Accordingly, it would have been obvious to one having ordinary skill in the art to have further reacted the amine-modified hydrogenated polymers of Belt et al to with materials similar to those disclosed by the secondary references with the reasonable expectation of success.
